TO WHOM IT MAY CONCERN:

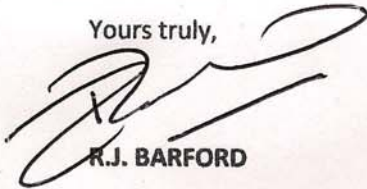

Dear Sir/Madam,

Re: Use of Enviro Fuel by Manica Malawi Limited

With regard to the aforementioned product, we as **Manica Malawi Limited** have been using Bio diesel in our over-border fleet of International Freight Liners, as well as our local container depot delivery fleet and some of the company vehicles [including my own vehicle] for the past 16 months. During this time we have found that our consumption figures have improved and we have further found that the engine performance has also improved. From our perspective it is vitally important to us to continue to have access to bio diesel due to the overall improved performance we have achieved. As a result of the improved performance we have achieved cost savings for both ourselves and our clients.

We highly recommend the initiative to produce/supply bio diesel and can confirm that we have experienced no negative effects whatsoever on any of our vehicles in the 16 months that we have been using the product. In terms of our group sustainability requirements the use of Bio diesel is extremely important to us as apart from the positive performance improvements, this also contributes significantly towards our group strategy of increasing our 'green footprint' in a sustainable and responsible manner.

Yours truly,

R.J. BARFORD

Managing Director
